

SHAHRUL SAIFUDDIN BIN AHMAD ROSLI

FULL-STACK ENGINEER · REACT NATIVE · LARAVEL · NODE.JS

Kuala Lumpur, Malaysia • +60 17-275 0530 • saifuddinshahrul@gmail.com • github.com/ShahrulSaifuddin

PROFILE

Full-stack engineer with 5 years shipping production mobile and web systems across EV charging, fintech and event ticketing, with two products live on the App Store and Google Play. Owns features end to end — React Native and React front ends, Laravel and Node.js APIs, payment gateway and hardware protocol integrations, and CI/CD onto Linux VPS infrastructure.

TECHNICAL SKILLS

Mobile React Native 0.81, React Navigation, Redux Toolkit, Reanimated, Firebase Cloud Messaging, Pusher, Vision Camera (QR), Google & Apple Sign-In, native module bridging (Kotlin / Swift), App Store & Google Play releases

Web React 19, TypeScript, Vite, Tailwind CSS, shadcn/Radix UI, Apollo Client & GraphQL, Framer Motion, React Query, static prerendering (SSG), Vue.js

Backend & Data Laravel 10, PHP 8, Node.js, Express, REST API design, Sanctum & JWT, Eloquent ORM, queued jobs & schedulers, MySQL, MongoDB, SQLite, Firebase

Integrations OCPP 1.6 / 2.0 (EV charging), Stripe, SenangPay, S-Pay Global, Finexus, LHDN MyInvois e-Invoicing, FCM & Expo Push, Twilio / Vonage, headless WordPress (WPGraphQL)

DevOps & Tools Git & GitHub, GitHub Actions CI/CD, CloudPanel, Nginx, PM2, Linux VPS, Gradle / AGP / NDK, CocoaPods, Jira, Agile & Scrum

PROFESSIONAL EXPERIENCE

Karuna Sarawak Enterprise Sdn Bhd — Sarawak, Malaysia

Aug 2024 – Present

Full-Stack Developer

FastEV — *EV charging network · live on the App Store & Google Play*

- Sole developer of the React Native app (450 of 494 commits; 42 screens, 5 Redux Toolkit slices) and lead contributor on the Laravel 10 backend (402 of 830 commits, three-developer team; 90 API routes, 42 models).
- Integrated OCPP 1.6 / 2.0 charge-point hardware — remote start/stop commands plus live meter and status events — and mapped it onto prepaid billing priced per kWh or per minute.
- Shipped four payment and fiscal integrations: SenangPay, S-Pay Global (including a bridged Android native module and iOS deep-link return), Finexus card pre-authorisation, and LHDN MyInvois e-invoicing.
- Delivered the Android 16 KB page-size migration ahead of the Google Play deadline: React Native 0.71 → 0.81, React 18 → 19, AGP 8.13, compileSdk 36, NDK 27.
- Cut push-notification latency roughly 3× with FCM OAuth token caching and pooled multi-device delivery, and made wallet billing safe against duplicate concurrent hardware events.

SD Engage — *event ticketing for Sarawak Digital Economy Corporation Berhad · App Store & Google Play*

- Core engineer on a 15-developer platform; owned the Sanctum-authenticated REST API and the push and realtime layer serving the published iOS and Android client (413 commits, ~26 of 38 mobile API controllers).
- Built mobile checkout and payments (Stripe PaymentIntents with webhooks, S-Pay Global), QR ticket check-in, business matching, 1:1 messaging and e-certificates, with batched Expo push and Pusher realtime events.

Karuna Growth Suite — *corporate web platform, karunaventure.co · sole developer*

- Built a headless WordPress (WPGraphQL) + React 19 / Vite platform prerendered to static HTML across 35 routes — Lighthouse 100 Accessibility, 100 Best Practices, 100 SEO, 90+ Performance — letting non-technical staff manage every page without touching code.
- Migrated the product off a low-code backend onto a self-built Express / SQLite API (JWT auth, bcrypt, rate limiting, SMTP) with zero call-site changes; shipped an admin CRM and GitHub Actions CI/CD to a CloudPanel / Nginx VPS with a PM2-managed API.

CTApps Digital — *commercial platform, ctappsdigital.com · sole developer*

- Built the customer-facing platform and admin inquiry dashboard (React 18, Vite, Tailwind, shadcn/Radix): eight-product catalogue, gated lead capture, product-grounded LLM assistant, full auth (email, Google OAuth, OTP) and a DPR-aware responsive image pipeline.

Thunder Software (M) Sdn Bhd — Georgetown, Penang

Jul 2022 – Jul 2024

Software Engineer

- Led full-stack development of a MERN scheduling application (React, Node.js / Express, MongoDB), raising measured application performance from 55% to 95–100%.
- Ran Agile delivery in Jira, building custom workflow configurations and automations that streamlined releases across the team.

SkyMind CNS Sdn Bhd — Georgetown, Penang

Sep 2021 – May 2022

Junior AI Engineer

- Performed data annotation and validation testing for computer-vision training pipelines, and contributed as a hybrid mobile front-end engineer adapting web applications for mobile.

EDUCATION & CERTIFICATIONS

B.Eng (Hons) Electrical and Electronic Engineering — Universiti Teknologi MARA, Pulau Pinang · CGPA 3.70 / 4.00

Mar 2016 – Jul 2019

Certifications — Certified Engineer in Computer Vision (SkyMind) · Full Stack Web Development Bootcamp
